

# Discovery.Visual

Seeing is believing

Sometimes the easiest way to understand something is to see it with your own eyes. That's why Centennial Software has introduced **Discovery.Visual**, the latest addition to its market-leading Discovery asset management solution.

From a general overview of the entire network, down to understanding PCs at the component level, **Discovery.Visual** helps IT staff, managers and executives fully scope and understand their IT estate by dynamically presenting all discovered assets in a graphical format. This enables users to quickly assess the relationships between PCs and switches; compare the status of machines; determine the extent of software deployments and much more. With the adage that 'a picture paints a thousand words', **Discovery.Visual** helps managers make informed decisions more swiftly and provides an at-a-glance reference to the state of the network.

**Discovery.Visual** is included in the Discovery 'Enterprise Edition' or can be purchased separately to work with any existing Discovery installation\*. **Discovery.Visual** is based on standard Microsoft Visio technology, and as such no special training or skills are required beyond an understanding of the Visio interface.

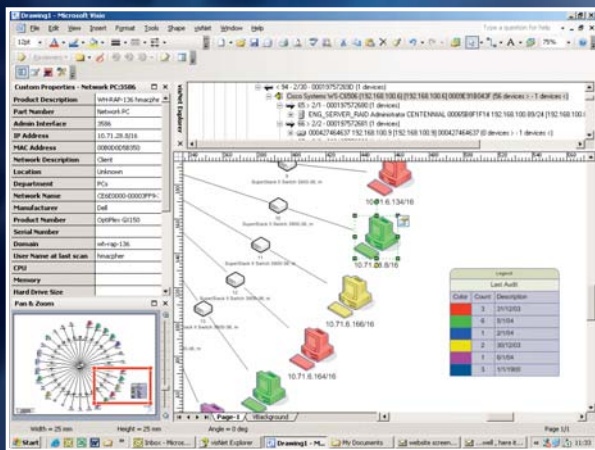

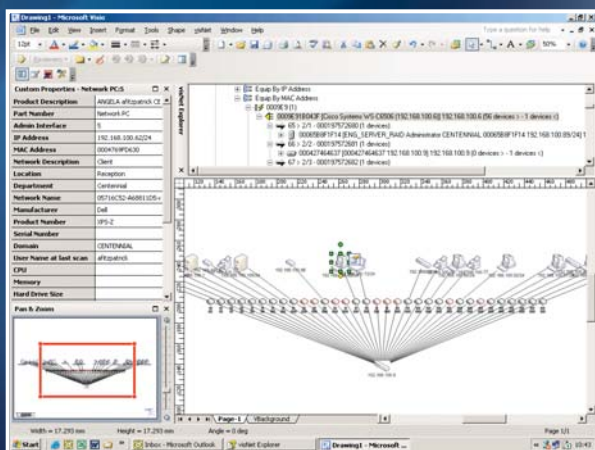

\* Supported versions of Discovery only Require MS Visio 2003 Professional.

## Business Benefits

- **Make better IT decisions**  
Full network visualization based on an accurate and dynamic view of the current network status enables faster and better IT decisions.
- **Migrations, Upgrades and Capacity Planning**  
Plan and monitor IT projects visually – use color-codes to follow the progress of projects and spot potential problems before they impact on delivery
- **IT Service Optimization and Risk Mitigation**  
Identify the possible impact of network changes and system downtime; immediately access user, software and configuration data on all PCs and hardware assets

## Key Features

- **Instantly create network 'maps' from dynamic Discovery data**  
Complete network diagrams can be created with a single click, or by dragging and dropping individual items.
- **Monitor changes over time**  
Identify risks, dependencies and changes by dynamically refreshing the diagrams to reflect the current state of the network. Update individual devices on the fly.
- **Instant drill-down**  
Drill down from high level views into devices and PCs to access up-to-date information on users, software installations, machine configuration etc.
- **Share information and diagrams**  
Create searchable web pages of graphics and data; prepare executive reports and share diagrams with staff across the organization using formats including Excel, html and xml.
- **Define your preferred view of the network**  
Take full advantage of **Discovery.Visual**'s flexibility to create color-coded diagrams to your business' unique requirements in order to highlight issues, track progress or reflect current status.

The screenshot shows a web browser displaying a 'PC Report' table with the following data:

Displayed Text	Network Name	Network Description	Operating System	Memory	CPU	Hard Drive Capacity
10.71.20.23/16	CE8E0000-00003FF9-3F840080-00CE3F2	Client	WINNT
